

PLACEMENT-CELL STUDENT AI-USE POLICY

Enforceable guidelines for responsible and ethical generative AI adoption in career activities

1. Student-AI Scenario Classification Matrix (EU AI Act Framework)

To ensure career fairness, all activities are categorized under four risk tiers. Students must strictly adhere to these rules.

Scenario Description	Risk Tier	Reasoning & Enforceable Conditions
1. AI résumé editing & polishing	Limited	Allowed. Substance must remain the student's; AI may only refine language/grammar.
2. AI mock interview practice	Minimal	Allowed. Personal study aid; does not affect recruiter evaluation directly.
3. AI-written application essays	High-risk	Allowed with mentor check + explicit student declaration of AI usage.
4. AI-assisted GitHub portfolio projects	High-risk	Allowed subject to a mandatory oral code defense before placement drive.
5. AI in graded internal assignments	Unacceptable	Banned for direct skill tests. Limited with disclosure for application tests.
6. AI-generated CGPA/marks on résumé	Unacceptable	Outright ban. Considered academic credentials falsification and fraud.
7. AI-cloned voice for video interviews	Unacceptable	Outright ban. Fabricates student identity and compromises recruiter trusts.
8. AI skills self-assessment tools	Minimal	Allowed. Private tool for student self-reflection and mock evaluation.

2. Permitted Uses (Allowed Actionable Items)

- 1. AI may be used to: rewrite and optimize resume bullet points for better verb choice and clarity.
- 2. AI may be used to: simulate live mock interview dialogues for private practice and feedback.
- 3. AI may be used to: clarify complex technical topics, algorithms, or OS fundamentals during study mode.
- 4. AI may be used to: format raw codebase files and generate inline code comments for clarity.
- 5. AI may be used to: structure structured study schedules and outlines from target syllabi.
- 6. AI may be used to: identify bugs and suggest code refinements for personal practice projects.

3. Prohibited Uses & Enforceable Detection Methods

- Rule 1:** AI may NOT be used to fabricate experiences, projects, or internships that the student did not complete.
Detection Method: Mandatory oral defenses on resume projects, requiring live code walkthroughs and architectural reasoning.
- Rule 2:** AI may NOT be used to alter, generate, or fake academic data (CGPA, active backlogs, or test scores).
Detection Method: Automatic database cross-referencing against the university's academic registrar portal.
- Rule 3:** AI may NOT be used to clone a student's voice or use deepfakes for asynchronous recruiter video submissions.
Detection Method: Recruiter integration of random live challenge questions and multi-factor biometric checks.
- Rule 4:** AI may NOT be used to ghostwrite application essays where student voice is the primary grading criteria.
Detection Method: Stylometric analysis comparing motivation essays with 2-3 historical in-class writing samples.

4. Enforcement & Compliance Statement

The placement cell will conduct random oral project defenses and academic checks on 20% of placed students. Verified violations of Prohibited Uses will result in a formal written warning and a mandatory re-evaluation for the first offense, while a second infraction will lead to immediate suspension of placement assistance for the current academic cycle. The cell acknowledges that AI usage cannot be fully monitored in private; the policy relies on student integrity and understanding the severe long-term career risks of credential fraud.
